

C1
Prd
that the shadow of the character pattern portion 1'a of the character hologram plate 1' is directly formed as an area 32 on the three-dimensional subject O. Upon reconstruction, this image is formed as a magenta shadow on the surface of the image of the three-dimensional subject O, and therefore the image of the shadow is not recorded in the form of a three-dimensional pseudoscopic image. --

In the Claims:

Please amend claims 1, 8, 10, 14, 15 and 16 by replacing them with the like numbered claim hereinbelow. A marked up set of claims is provided at the end of the response to illustrate the changes made.

C2
1. (Twice Amended) A color hologram display comprising a combined reflection and volume type of single layer hologram or multilayer hologram, wherein a color pattern of plane characters or images and a color three-dimensional subject image are reconstructably recorded therein while spatially superposed one upon another, and wherein the plane character or image is on other than a surface of the hologram.

C3
8. (Twice Amended) A process of fabricating a color hologram display, comprising recording a color three-dimensional subject image and a color pattern of plane characters or images as hologram images in the same photosensitive material.

SY
10. (Amended) The color hologram display fabrication process according to claim 9, wherein an area of said hologram photosensitive material other than a portion thereof corresponding to said color pattern of plane characters or images is deactivated by photosensitization, and a reflection type hologram of a scatter plate is then recorded in said portion of said hologram photosensitive material to make said color hologram display.

CS
14. (Twice Amended) A process of fabricating a color hologram display as recited in claim 7, comprising the steps of employing a subject hologram plate for forming a color three-dimensional subject image and a character hologram plate for reconstructing a color pattern image of plane characters or images, wherein said subject hologram plate and said character hologram plate are separately made, superposing said subject hologram plate and said character hologram plate one upon another, and providing diffracted light from said subject hologram plate and said character hologram plate to simultaneously enter in the same photosensitive material to record said color three-dimensional subject image and said color pattern image of plane characters or images as hologram images.

15. (Twice Amended) A hologram plate used to fabricate a color hologram display, wherein a subject hologram plate for forming a color three-dimensional subject image and a character hologram plate for reconstructing a color pattern image of plane

characters or images are separately made, said subject hologram plate and said character hologram plate are positioned with a given space located therebetween, and diffracted light from said subject hologram plate and said character hologram plate is simultaneously entered in the same photosensitive material to record said color three-dimensional subject image and said color pattern image of plane characters or images as hologram images.

16. (Twice Amended) A hologram plate used to fabricate a color hologram display wherein a subject hologram plate for forming a color three-dimensional subject image and a character hologram plate for reconstructing a color pattern image of plane characters or images are separately made, said subject hologram plate and said character hologram plate are superposed one upon another, and diffracted light from said subject hologram plate and said character hologram plate is simultaneously entered in the same photosensitive material to record said color three-dimensional subject image and said color pattern image of plane characters or images as hologram images.

REMARKS

Reconsideration is respectfully requested.

Claims 1-17 are pending in this application of which claims 1, 8, 10, 14, 15 and 16 have been amended.

The specification is amended to correct a typographical error (page 15, line 24 "photosensitive material 32" is changed to --photosensitive material 31--.
